

Visualizer

Warehouse visualization at your fingertips

Maximize system uptime with supervision and status notifications directly on your mobile device.

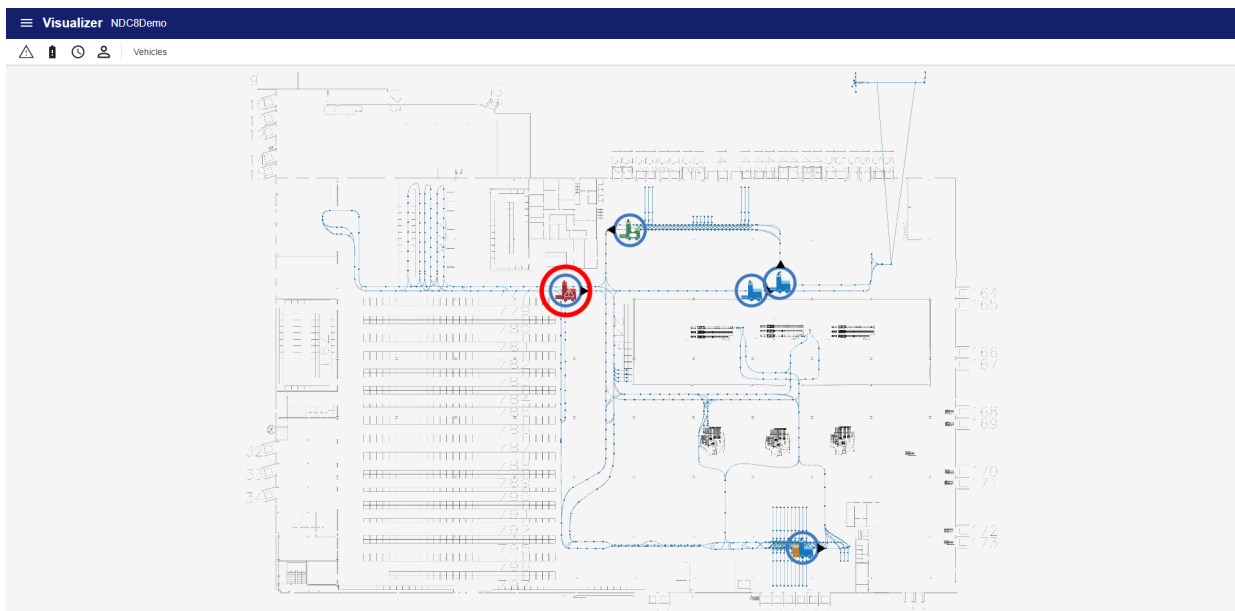

Visualizer is a user friendly web application that lets you supervise your NDC8 system in real time. Follow a live overview of the system and keep track of vehicle statuses - wherever you are. You can easily set up push notifications to get instant feedback when a vehicle needs support.

With access to Visualizer diagnostics you can analyze your system performance over time. Visualizer identifies areas of interest and lets you dig into the details.

Features

- Supervise your system in real time 24/7.
- Use your phone, tablet or computer.
- Manage user access to system data and diagnostics with different user roles.
- Access all your sites with a single login.
- Secure, encrypted communication.
- Easy to set up and use.
- Notifications:
 - Get notified instantly if a vehicle error occurs.
 - Customize your own notification schedule to only receive notifications on specific weekdays and time of days.
- Diagnostics and troubleshooting:
 - Analyze the system performance over time.
 - Identify areas and vehicles with deviating data.
